

SLIDE 1 / 7

Introduction

Open: Good morning. I'm Omar Hammoud.

Personal connection: Computer Science background + volunteer paramedic, Islamic Medical Association in Saida.

What I see: Ambulance missions, vehicles, equipment, reports - while focusing on helping people.

Why I built it: A real problem I experience as a volunteer.

That is why I built NGO Hub.

SLIDE 2 / 7

The idea

One place: Bring together information spread across messages, papers, files and people.

Organize: Missions, vehicles, medical equipment, staff activity and reports.

Practical: Arabic and English.

Today's focus: The feature that can save volunteers and staff time - the AI assistant.

Let me show you how AI can help.

SLIDE 3 / 7

Why AI?

The problem: After a mission or a vehicle problem, someone still has to document what happened.

They already know the information. Turning it into a report takes work.

The approach: Explain naturally instead of completing fields one by one.

The result: AI helps organize that explanation into a draft.

Let me show you a simple example.

SLIDE 4 / 7

Demo 1: Vehicle problem

Set the scene: On duty; notice an ambulance problem.

Example: "Ambulance A03 has broken rear lights. The ambulance is still working, but it should be checked before the next night shift."

Point out: Ambulance + problem + urgency.

Review before submitting. AI helps with paperwork; the person stays in control.

But what happens when information is missing?

SLIDE 5 / 7

Demo 2: Missing information

Example: "We completed the mission and transported the patient safely."

Missing: Mission location. The assistant asks: "Where did the mission take place?"

Flow: I answer; it completes the draft.

Key point: Ask, do not guess. No diagnosis, no medical decisions, no automatic saving without review.

Support the volunteer; respect their judgment.

SLIDE 6 / 7

The humanitarian side

People are the goal. Technology is a tool.

Remember the volunteers: Long shifts, difficult missions - and paperwork still waiting.

The value: Less administrative work means more time and attention for the humanitarian mission.

Emphasize: AI that supports volunteers.

Not AI that replaces volunteers. AI that supports them.

SLIDE 7 / 7

Closing

My journey: A problem I saw as a volunteer became a real application through what I learned in the Digital Hub.

Recap: Organize missions, vehicles, equipment, staff activity and reports; make reporting easier with AI.

Success = impact. Save a few minutes of paperwork... *[pause]* Keep information organized... *[pause]* Give the team more time to help someone.

Then the project has done what I wanted it to do. Thank you.
